How we add value

Understanding, creating and help in running businesses, with capability to analyze, and significantly improve business processes.

With our capability to solve complex business problems by harnessing technology, Deutron has extensive experience in providing business solutions. We also provide consultancy on Corporate strategy, IT strategy and Business Process Improvement.

We have a permanent presence at the state of-the-art of technology. Its strong knowledge management processes as well as mandatory R&D requirements allowed Deutron to reach and remain at the cutting edge of technologies, thereby significantly reducing lead-time of project execution and simultaneously offering solutions deemed to be difficult or impossible.

We exploit the internet technology to replace expensive technology solutions with simple, cost effective and business oriented solutions. Deutron's skills are focused on Microsoft and Oracle technologies while in parallel, employing the power of other technology platforms. Our expertise also covers systems integration networking and internet working protocol.

Our Vision

"To be a globally competitive cutting edge technology company partnering with clients and thereby keeping them on the edge of innovation for life."

Our Mission

The company operates with a five point mission:

- ➤ To constantly improve competence
- ➤ Optimal solution at affordable cost to clients
- ➤ Provide end-to-end solutions that are unique, integrated and customized
- ➤ Faster and ensured delivery
- ➤ Value at all times

Quality & Methodology

We believe in delivering value for money. To achieve this, we leverage our multi-tired expertise in this vital technology to constantly improve competence. On time completion and delivery is one of our hallmark.

Our Quality policy

Converting concepts to applications, keeping our partners on the cutting edge of technology by continually improving the methodology, there-by, providing cost-effective, faster, reliable and scalable solutions.

Selcius Enterprise Application Software (EAS) tightly connects business functions across departments and divisions. Developing precisely for modern growth-minded, mid-size enterprises, it helps them maximize organizational efficiency, streamline process and gain strategic advantage.

Selcius compresses diverse business activities and optimizes the resources available. It handles a wide array of enterprise-specific tasks, including purchasing and processing, inventory control and material planning, work order planning and production, bill of materials management, sales, shipping, invoicing, material costing, financials, distribution and logistics, maintenance, HRMS, CRM and extensive reporting.
